Join us for a day trip around Alachua County, home of Gainesville and the University of Florida, to see the hydrologic cycle of the Floridan Aquifer from recharge to discharge.

Tentative stops along the way include:

- Paynes Prairie Preserve State Park’s La Chua Trail, where water recharges the Floridan Aquifer (should see alligators)
- Cabot Koppers EPA Superfund site. A creosote contaminant site with complex hydrogeology with active remediation systems
- Devil’s Millhopper Geological State Park
- Spring Head (Ichetucknee Springs State Park), where groundwater discharges from the aquifer
- Lunch is Included
