This is What We HAVE LOST

Historic Land-Water Change from 1932-2010

1,900 square miles lost since the 1930s
This is What We Could Lose

Potential to lose up to an additional 1,750 square miles of land over the next 50 years
Our Communities and Livelihoods at Risk

Predicted Future Flooding from a 100 Year Flood Event

Future Without Action

Potential for damages to reach $7.7 to $23.4 billion annually

Increasing threats to lives, jobs, communities and the economy
The Analytical Challenge

- Complex coastal environment
  - Wetlands, bays, barriers
  - Rural, urban, industry
- Planning horizon
  - 50 years – need to consider change over time
- Multiple future scenarios
- Projects
  - 210 restoration projects
    - 10 different types
  - 34 Structural protection projects
  - 156 Non-structural protection projects
- About 18 months
Technical Advisory Committee

- Steve Ashby, Mississippi State University
- John Callaway, University of San Francisco
- Fred Sklar, South Florida Water Management District
- Si Simenstad, University of Washington

2012 Coastal Master Plan
Today’s Sessions

Predicting the Future of Coastal Louisiana I: Effects of Tides & Storms
• **MODERATOR - Denise Reed**
• Ehab Meselhe – Eco-Hydrology
• Dallon Weathers – Barrier Island Morphology
• Hugh Roberts – Storm Surge and Wave
• Jordan Fischbach – Damage and Risk

Predicting the Future of Coastal Louisiana II: Biological Response
• **MODERATOR - Carol Parsons Richards**
• Greg Steyer – Wetland Morphology
• Jenneke Visser – Vegetation
• Andy Nyman – Fish and Wildlife
• Denise Reed – Master Plan Formulation
