¹Area Metropolitana del Valle de Aburra, Medellín, Colombia

²Kean University, School of Natural Resources, Union, NJ

The metropolitan Park for Water conservation is the scenery to know, learn and enjoy the environmental education adventure in the metropolitan area. This Project of environmental education looks for the rational use of recreational spaces as educational spaces for water conservation. The Park for Water Conservation requires educational compromises from the government through educational strategies that help the citizens in the area of influence of the project know as "Valle de Aburra" in Medellin, Colombia. Through the use of interviews and evaluation of natural resources, climate and forest the project pretends to create the space necessary for the environmental education of students and adults interested in the water conservation. The responsibility is that of a community that will improve their quality of living. This is a process of change in the cultural practices of the human groups without ignoring their basic expectative and differences. The main objective is to respect the environment, the water resources and life in general.
