Jacque Breman, Ph.D.
Tri-county Alternative/Specialty Crops Extension Agent
civiliday@ufl.edu

Currently conducting Extension outreach education and applied research at the UF-IFAS Partnership facility at Hastings, which serves Flagler, Putnam, and St. Johns counties. Examples of potentially profitable crops include: Sorghum for grain or biofuel, strawberry, peach, nectarine, blueberries, and grapes. As part of the USDA block grant obtained by Dr. Bielinski Santos, he is demonstrating and teaching protected agriculture principles which might help transition traditional foliage and fern crops under existing shade structures to stone fruits, blueberries, blackberries, and specialty peppers in Putnam County.
